

Agentic AI Course - Day 15

Krish Naik - 10h course | Video 9:20-10:00

Capstone Project & Review

Build a small end-to-end agentic RAG app that uses everything: a LangGraph agent with tools, RAG over your own docs, guardrails on I/O, and an eval set to measure quality. Then review the whole roadmap.

Key concepts

- Pick a real use case (e.g. a docs Q&A assistant with actions).
- Combine: agent (LangGraph) + RAG (retriever) + tools + guardrails.
- Measure with your eval set; iterate on weak areas.
- Review the Agentic AI roadmap for what to learn next.

Code example

```
# Capstone: 'Docs Assistant' -> agent that retrieves from your PDFs,  
# calls tools, is guarded, and is scored by your evals.
```

Today's tasks (1.5h)

- ☐ Ship a small end-to-end agentic RAG app
- ☐ Run your evals and improve one metric
- ☐ Write a short README + push to GitHub
