

System Design (Telusko) - Day 5

One-Shot 5h course | Video 1:00-1:15

CDN & Content Delivery

Serve static content from edge locations near users.

Key concepts

- CDN = geographically distributed edge servers caching static assets.
- Reduces latency and origin load for images, CSS, JS, video.
- Cache invalidation and TTLs keep content fresh.
- Pull vs push CDNs.

Key example

User -> nearest edge PoP -> (miss) origin; most static requests never hit your servers.

Today's tasks (1.5h)

- ☐ Understand edge caching
- ☐ List assets to serve via CDN
- ☐ Note invalidation strategies
