

System Design (Telusko) - Day 15

One-Shot 5h course | Video 3:30-3:45

API Design & Gateway

Design clean APIs and route them through a gateway.

Key concepts

- REST resources, verbs, status codes; versioning.
- API gateway: single entry - auth, routing, rate limit, aggregation.
- Pagination, filtering, idempotency for writes.
- gRPC vs REST vs GraphQL trade-offs.

Key example

Client -> API gateway -> microservices; gateway centralizes cross-cutting concerns.

Today's tasks (1.5h)

- ☐ Design a REST resource
- ☐ Add pagination
- ☐ Note the gateway's jobs
