

# System Design (Telusko) - Day 18

One-Shot 5h course | Video 4:15-4:30

## Search - Elasticsearch

Add fast full-text search to your app.

### Key concepts

- Search engines build an inverted index for text queries.
- Elasticsearch/OpenSearch for full-text, filters, ranking.
- Sync data from your primary DB into the search index.
- Relevance scoring and analyzers.

### Key example

Primary DB -> pipeline -> search index; queries hit the search cluster, not the DB.

### Today's tasks (1.5h)

- ☐ Learn the inverted index
- ☐ Design product search
- ☐ Note keeping the index in sync
