

DSA (Abdul Bari) - Day 1

45-day plan | YouTube playlist course

Introduction to DSA

Why data structures & algorithms matter and how to think about problems.

Key concepts

- Data structure = a way to organize data; algorithm = steps to solve a problem.
- Choosing the right DS makes code faster and simpler.
- Trade-offs: time vs space; readability vs speed.

Key idea / example

Same task, different DS: searching a sorted array (binary) beats scanning a list.

Today's tasks (1.5h)

- ☐ Watch the intro lecture
- ☐ List 5 data structures you know
- ☐ Note one time/space trade-off
