

DSA (Abdul Bari) - Day 4

45-day plan | YouTube playlist course

Recursion - Basics

A function that calls itself; base case + recursive case.

Key concepts

- Every recursion needs a base case to stop.
- The call stack holds each pending call.
- Think: solve smaller subproblem, combine.

Key idea / example

```
factorial(n) = n * factorial(n-1); base: factorial(0)=1.
```

Today's tasks (1.5h)

- ☐ Write factorial recursively
- ☐ Trace the call stack
- ☐ Convert a loop to recursion
