

Minimum Spanning Tree

Connect all nodes with least total weight.

Key concepts

- Prim's: grow the tree from a node (PQ).
- Kruskal's: add cheapest edges (union-find).
- Both are greedy.

Key idea / example

Union-Find (DSU) detects cycles in Kruskal's.

Today's tasks (1.5h)

- ☐ Implement Prim's
- ☐ Implement Kruskal's + DSU
- ☐ Compare the two
