

Agentic AI Course - Day 11

Krish Naik - 10h course | Video 6:40-7:20

Deep Agents (Planning & Multi-Step)

Deep / multi-agent systems break a big task into sub-tasks, plan, and coordinate multiple specialised agents (e.g. planner, researcher, writer). LangGraph orchestrates them.

Key concepts

- Planner-executor pattern: one agent plans steps, others execute them.
- Sub-agents with roles and their own tools.
- Shared state / message passing so agents collaborate.
- Guard against loops with step limits and stop conditions.

Code example

```
# Multiple nodes = multiple agents; a supervisor routes between them
# planner -> researcher -> writer -> END, coordinated by a router
```

Today's tasks (1.5h)

- [] Sketch 2-3 agent roles for a task
- [] Wire them as nodes in a graph
- [] Add a supervisor/router + step limit
