

Agentic AI Course - Day 14

Krish Naik - 10h course | Video 8:40-9:20

LLM Gateways & Integration

A gateway sits in front of many models/providers - handling routing, fallbacks, rate limits, caching and cost. Today you tie the whole course together into one app.

Key concepts

- Gateway/router: switch providers or models by cost, latency, or task.
- Fallbacks & retries: if one model fails, try another automatically.
- Caching: reuse answers for repeated prompts to cut cost.
- Integration: combine agent + RAG + guardrails + evals into one service.

Code example

```
# Route to a cheap model for simple asks, a strong one for hard asks;  
# add retry/fallback and a response cache.
```

Today's tasks (1.5h)

- [] Add a simple model router (cheap vs strong)
- [] Add a fallback on error
- [] Combine agent+RAG+guardrails in one flow
