

DSA / Algorithms (Abdul Bari) - Day 1

45-day plan mapped to the Algorithms playlist

Introduction & Algorithm Basics

What an algorithm is, priori analysis vs posteriori testing, and its characteristics.

Watch these Abdul Bari videos

- > 1. Introduction to Algorithms
- > 1.1 Priori Analysis and Posteriori Testing
- > 1.2 Characteristics of Algorithm

Key concepts

- Algorithm = finite, well-defined steps to solve a problem.
- Priori analysis (math, before running) vs posteriori testing (measure after).
- Characteristics: input, output, definiteness, finiteness, effectiveness.

Key idea

We analyse algorithms mathematically (priori) so results are machine-independent.

Tasks (1.5h)

- [] Watch the 3 videos
- [] Note the 5 characteristics
- [] Write one algorithm in pseudocode
