

DSA / Algorithms (Abdul Bari) - Day 28

45-day plan mapped to the Algorithms playlist

Optimal Binary Search Tree

OBST for successful search via DP.

Watch these Abdul Bari videos

- > 4.6 Optimal Binary Search Tree (Successful Search Only) - Dynamic Programming

Key concepts

- Build a BST minimising expected search cost.
- DP over key ranges.
- Uses search probabilities.

Key idea

`cost[i][j]` combines subtree costs plus probability weight.

Tasks (1.5h)

- ☐ Watch the video
- ☐ Fill the OBST table
- ☐ Note the cost recurrence
