

System Design (Telusko) - Day 4

One-Shot 5h course | Video 0:45-1:00

Caching

Store hot data close to the user to cut latency and DB load.

Key concepts

- Cache layers: browser, CDN, application, and a store like Redis/Memcached.
- Cache hit vs miss; aim for a high hit ratio.
- Eviction policies: LRU, LFU, TTL.
- Write strategies: write-through, write-back, cache-aside.

Key example

Cache-aside: app checks cache first, on miss reads DB and populates the cache.

Today's tasks (1.5h)

- ☐ Learn cache-aside vs write-through
- ☐ Pick an eviction policy for a feed
- ☐ Identify what NOT to cache
