

System Design (Telusko) - Day 7

One-Shot 5h course | Video 1:30-1:45

Database Replication

Copy data across nodes for availability and read scaling.

Key concepts

- Leader-follower (master-slave): writes to leader, reads from followers.
- Async vs sync replication - lag vs latency trade-off.
- Failover: promote a follower if the leader dies.
- Read replicas scale reads.

Key example

Writes -> leader; reads -> replicas; watch for replication lag / stale reads.

Today's tasks (1.5h)

- ☐ Learn leader-follower
- ☐ Explain replication lag
- ☐ Sketch failover
