

# System Design (Telusko) - Day 16

One-Shot 5h course | Video 3:45-4:00

## Proxies - Forward & Reverse

Understand proxies and where they sit.

### Key concepts

- Forward proxy: sits in front of clients (egress, filtering).
- Reverse proxy: sits in front of servers (LB, TLS, caching).
- Nginx/Envoy commonly act as reverse proxies.
- Benefits: security, caching, SSL termination.

### Key example

Reverse proxy terminates TLS, caches, and load-balances before hitting app servers.

### Today's tasks (1.5h)

- ☐ Differentiate forward vs reverse
- ☐ List reverse-proxy benefits
- ☐ Sketch it in an architecture
