

System Design (Telusko) - Day 19

One-Shot 5h course | Video 4:30-4:45

Reliability - Monitoring, Logging, Fault Tolerance

Keep systems observable and resilient.

Key concepts

- Monitoring (metrics), logging, tracing = observability.
- Redundancy, retries, timeouts, circuit breakers.
- Graceful degradation and failover.
- SLA/SLO/SLI and alerting.

Key example

Circuit breaker stops calling a failing service so failures don't cascade.

Today's tasks (1.5h)

- ☐ Define SLO vs SLA
- ☐ Add retries + timeout to a call
- ☐ Explain a circuit breaker
