

System Design (Telusko) - Day 20

One-Shot 5h course | Video 4:45-5:00

Case Study & Review - Design a System

Put it all together: design a real system end to end.

Key concepts

- Framework: requirements -> estimates -> high-level design -> deep dive -> bottlenecks.
- Example: URL shortener, or a Twitter-like feed.
- Apply LB, cache, DB choice, sharding, queues, CDN.
- Review the whole course and your notes.

Key example

Design a URL shortener: hash/counter for IDs, KV store, cache hot links, CDN for redirects.

Today's tasks (1.5h)

- ☐ Design a URL shortener end to end
- ☐ Identify bottlenecks & fixes
- ☐ Review all 20 topics
