

DSA / Algorithms (Abdul Bari) - Day 20

45-day plan mapped to the Algorithms playlist

MST - Prim's & Kruskal's

Minimum spanning trees via Prim's and Kruskal's.

Watch these Abdul Bari videos

> 3.5 Prim's and Kruskal's Algorithms - Greedy Method

Key concepts

- MST connects all nodes with minimum total weight.
- Prim grows from a node; Kruskal adds cheapest edges.
- Kruskal uses union-find to avoid cycles.

Key idea

Kruskal: sort edges, add if it doesn't form a cycle.

Tasks (1.5h)

- ☐ Watch the video
- ☐ Implement Prim's
- ☐ Implement Kruskal's + union-find
